---

**Versatility IV** has been designed with menu structure in mind. It exhibits 4 different and distinct menu styles that are configurable. You can dramatically change the appearance of your entire website with just a menustyle switch. The menu styling is replicated in the splitmenu and the mainmenu (to a lesser extent) to create a consistent style.

### Versatility 4 Flexibility

Learn more about Versatility 4's many configuration, layout and modular options and see the power of its' flexibility and versatility in action. [Watch Now!](#)

You can designate which menu style you want to use on your site with a single control in the template's **index.php** file which is editable via the Joomla Administrator as well as in an external text editor.

- [MenuStyle1](#) - a rectangular based menu style, using pronounced glossy bars for the menu elements

- [MenuStyle2](#) - a rectangular based menu style, with a glossy first level, following by a more subtle, block colour bar and active tab item

- [MenuStyle3](#) - a rounded, tabbed based menu style, placed upon the glossy menu bar

- [MenuStyle4](#) - a more traditional style, utilising subtle triangular indicators
